

DMIT WING

Annual Report – 2020

50, Arpit Nagar, Gandhi Path, Vaishali Nagar, Jaipur (Raj.) - 302021

Science says fingerprints start developing in fetuses from 14-24 weeks with the brain pattern growing simultaneously and are interconnected. DMIT is a scientific study of fingerprint patterns that helps in understanding an individual's potential and personality.

Our aim is to introduce every citizen about their multiple intelligence so that they can unbox their life potential and their inborn talent which has been provided by Almighty God. Some people are unable to use the talent inside them because they do not know that they have this talent, due to which they cannot do anything and they remain unemployed. The objective of the Help India Online Foundation is to bring the hidden talent inside the people so that people can take advantage of that hidden talent.

We have organized awareness programs of DMIT in schools and colleges in rural and urban areas, and we have trained 500 centers of DMIT and also trained more than 1 lakh people. Till now 100+ training have been virtual & physical.

Our motto is to show the direction to such young people of India who are demented about their future and also help them become counselors. This will lead to India in better development.

Mentioned below is the brief report of the number of training is given from the day of its inception till now.

Number of Training	50+
Number of Center	500 across India
Number of DMIT trainer	28

Ms. Priyanka Mane
